

ImageConnect

Effective Imaging using SCCM

ImageConnect securely extends your Microsoft System Center Configuration Manager (SCCM) environment to Now Micro's production facility, ensuring up-to-date system imaging using your existing Operating System Deployment (OSD) Task Sequence. Units arrive onsite ready to deploy to end users.

Coupled with Now Micro's DICE (Data Information Collection Engine), organizations can leverage Now Micro's integration center to collect all system asset information, affix an organizational asset tag and report online.

Enabled by your Task Sequence

- ✓ Imaged
- ✓ Domain Joined
- ✓ Encrypted
- ✓ Updated
- ✓ Secured
- ✓ Inventoried

Benefits of ImageConnect

- ✓ Reduce hours needed to deploy new devices
- ✓ Consistency between new and reimaged devices
- ✓ Increase control and visibility
- ✓ Less transit time for devices
- ✓ Increased deployment flexibility
- ✓ Devices arrive user-ready
